**1. What Finasteride 1 mg Tablets are and what they are used for**

Finasteride 1 mg Tablets contain finasteride. Finasteride belongs to the group of medicines called 5-alpha reductase inhibitors.

Your doctor has prescribed Finasteride 1 mg Tablets because you have male pattern hair loss (also known as androgenetic alopecia). Finasteride 1 mg Tablets prevent further hair loss in men. Men with mild to moderate, but not complete hair loss, can benefit from using Finasteride 1 mg Tablets. Finasteride 1 mg Tablets block an important enzyme (Type II 5 $\alpha$ -reductase), which is involved in the regulation of the hair follicle.

In the scalp, Finasteride 1 mg Tablets specifically lower the levels of DHT, a major cause of male pattern hair loss. In this way, Finasteride 1 mg Tablets help to reverse the balding process and prevent further hair loss.

**2. What you need to know before you take Finasteride 1 mg Tablets**

**Do not take Finasteride 1 mg Tablets:**

- If you are allergic to finasteride or any of the other ingredients of this medicine (listed in Section 6).
- If you are a child or adolescent.
- If you are a woman (see also under 'Pregnancy and breast-feeding'). Finasteride 1 mg Tablets have been found to be ineffective in the treatment of hair loss (androgenetic alopecia) in women in clinical studies.
- If you are already taking finasteride or any other 5 $\alpha$ -reductase inhibitor for benign prostatic hyperplasia (BPH) or any other condition.

**Warnings and precautions**

Talk to your doctor or pharmacist before taking Finasteride 1 mg Tablets
